

SPECIALTY VENT

VENTED HAND PROTECTION

The Specialty Vent glove provides working hands with evaporative cooling on those sauna-like workdays with its fully ventilated design. The fully perforated palm combines with a breathable mesh back-of-hand to circulate air throughout the entire glove and keep your hands cool and comfortable while you work. Perforated synthetic leather reinforces high-wear areas of the thumb and index finger for added durability when using hand tools. The low-profile wrist closure creates a seamless fit to the wrist, while the micro-fleece thumb panel serves as a convenient place to wipe the sweat falling from your brow.

TOP VENTILATION

Lightweight mesh eliminates heat build-up, reduces fatigue and keeps hands cool and comfortable.

PALM VENTILATION

Perforated palm allows for maximum airflow.
